

# Back To Normal!

Emerald Director Charles Collier with grandsons Joseph and James

WHEN CHARLES COLLIER TALKS ABOUT TRE-EN-EN®, HIS STORY INCLUDES BOTH HIMSELF AND HIS GRANDSON.

At only 22-months-old, tiny Joseph delighted his grandparents by coming to stay with them. Charles and Carolyn's delight, however, was soon tinged with concern as they realized Joseph had severe upper respiratory system problems.

Charles and Carolyn took their grandson to the doctor's office, where he was given a steroid drug and an inhaler. Although the doctor explained it was a normal reaction, it broke their hearts to see that little body shaking uncontrollably from the medication. It was then that the Colliers spoke with their friends the Tolberts, who recommended GNLD products for the child.

Once he began taking Liqui-vite® (with Tre-en-en), Vita-Gard™, and Aloe Vera Plus™, Joseph improved dramatically. Today, Charles and Carolyn relish watching this active six-year-old play t-ball, kick the soccer ball, and go swimming. While Joseph continues his daily dose of GNLD products, he is completely free of medication!

Charles's health history includes high blood pressure and low energy. After his doctor of thirty years passed away, Charles needed to find a replacement—but it seemed all the doctors he saw were quick to

prescribe and slow to listen! Once again, Charles felt frustrated by the medical community; once again, he turned to GNLD for answers. Charles began a program of Tre-en-en, Omega III Concentrate, and Aloe Vera Plus. While his blood pressure

Charles and Carolyn with their grandkids

decreased, his energy increased. His doctor was amazed to learn that Charles had not filled any of his prescriptions—yet his blood pressure is back to normal!

Both Charles and Joseph are enjoying good health these days, *without* prescription medication. What a relief to Carolyn! This summer, Charles and Joseph will be spending plenty of time together, playing ball, swimming, you name it. Yes, everything is back to normal! ■
